2018 | West African Senior School Certificate Landmark University Secondary School, Kwara, Nigeria

WORK

Jan 2020 - *Now* | Freelancer: Full Stack Developer

-Quickhealth: Was part of a team responsible for integrating health service providers onto the platform.
Tools used: **SQL, Laravel, Javascript**

-The Way Center: Worked as the sole frontend developer creating an interface that connected surrogate parents to intended/adoptive parents.
Tools used: **React**

-McPherson Wallet: Developed a student wallet allowing students to fund the wallet and make purchases within the school campus
Tools used: **React Native, NodeJS, MongoDB, Paystack**

-Kiowope Web: Worked as the sole frontend developer for the Kiowope web platform consisting of both the Admin & Client dashboards.
Tools used: **React, Typescript, Sass**

-Sky city grocery: Developed the landing page for a groceries selling startup
Tools used: **React**

-E-SIWES Portal: Created a portal for students to register and contact their lecturers during the Student Industrial Work Experience Scheme (SIWES) for McPherson University. The portal was made up of three dashboards: Students, Lecturers and Admin.
Tools used: **React, Typescript, Chakra UI, Sass, NodeJS, MongoDB**

May 2021 - *Now*| Eredia: Full stack Developer

I am the solo developer amidst a team of designers, editors and product managers. I handle all projects concerning developing websites the conventional Wordpress developer cannot.

May 2021 - October 2021; Jan 2023 – July 2023 | Xclaim Labs: Frontend Developer:

I first joined Xclaim Labs in May 2021 as an entry-level developer responsible more for learning on the job rather than handling major projects. I worked closely with senior developers during this period and focused on advancing my skills as quickly as possible.
I rejoined the company in January 2023 as a skilled Fullstack Web developer with a focus on Frontend. I was assigned to develop the Admin dashboard for a Hotel/Short let platform called Quickstay. I made primary use of *React*, *Typescript*, *Redux*, *Sass* and *MUI Datagrid* during this period.
Most challenging during this phase was combining Axios and React Query for data fetching in the application. I also created and implemented custom hooks, and temporary state storage with Context API. I worked closely in a team made up of other developers, project managers and designers. Work was done remotely so communication was handled via Zoho and Microsoft Teams.

SKILLS

Core Competencies HTML | CSS | JavaScript | Figma | NodeJS/ExpressJS | React | Typescript | MongoDB | SQL
Soft Skills | Excellent communication | Attention to detail |Problem solving |Ability to work in teams |Tenacity and excellent work ethics

INTERESTS
